# CGT Calculator — How to Use This Workbook

*Works out Australian capital gains tax on share trades using FIFO parcel matching, by financial year (1 July – 30 June).*

*Cells marked "← Update here" or "← Update below" are inputs. Everything else is calculated by formulas, so don't type over it.*

**⚠ Not tax advice. This workbook is general information only. Check every result against your own records and current ATO guidance (or with a registered tax agent) before lodging. See Scope & Version and the Disclaimer at the bottom of this sheet.**

| Step | Task | What to do | Link |
|---|---|---|---|
| **1. SET UP** | | | |
| 1 | **Choose financial year & entity** | On CGT Summary, pick the Financial Year in B3 (e.g. 2025-26) and the Entity Type in B4 (Individual, Trust, Super Fund or Company). The CGT discount rate in B5 fills in automatically. | Go to → |
| 2 | **Enter prior-year losses** | Only needed if your losses come from years whose trades aren't loaded in this workbook. Enter last year's net capital loss carried forward (from your tax return) in CGT Summary F5. Leave it at 0 to use the carry-forward worked out from earlier years' trades in this workbook. F5 overrides that figure only when it's above 0. | Go to → |
| **2. LOAD YOUR BROKER DATA** | | | |
| 3 | **Account 1 (CommSec)** | Export your CommSec transaction statement and paste it into columns A–F from row 2 (Date, Reference, Details, Debit, Credit, Balance). A row counts as a trade when Details starts with B or S in the format "B 100 ABC @ 1.2345". Transfers are ignored. Total Amount comes from Debit/Credit, and brokerage is the difference from quantity × price. Parsed trades show in columns I–O. | Go to → |
| 4 | **Account 2 (CommSec Pocket)** | Same as step 3. Paste the CommSec Pocket statement into columns A–F from row 2. Parsed trades show in columns I–O. | Go to → |
| 5 | **Account 3 (CMC)** | Paste the CMC Markets statement into columns A–G from row 2 (Date, Reference, Type, Description, Debit, Credit, Balance). A row counts as a trade when Description starts with "Bght" or "Sold". Total Amount comes from Debit/Credit, and brokerage is the difference from quantity × price. Parsed trades show in columns J–P. | Go to → |
| 6 | **Check the combined trade list** | Account Summary shows each account side by side. Transaction History combines every broker trade, sorted by account then date. Cost base adjustment entries are added on top of these in the Parsed tab. Check quantity, price and brokerage against your contract notes. | Go to → |
| | ***Tip*** | *Paste values only (Ctrl+Alt+V → Values) so the sheet formatting stays intact. Leave unused accounts blank. Never type into the parsed columns on the right of each account tab.* | |
| **3. ADJUSTMENTS** | | | |
| 7 | **Review corporate events** | Considerations lists every ticker with its first and last trade date. Use it to spot tickers that changed name, were taken over or delisted. Log events in columns D–H for your records (this register does not change the calculations). | Go to → |
| 8 | **Record cost base adjustments** | Use this for events that don't appear in broker statements. Each table is read from fixed rows:<br>• Main register (rows 5–30, columns A–F): Account, Ticker, Date, Quantity (+/-), Unit Price, Brokerage. Total Amount (G) is calculated. Event Type (H) and Notes (I) are for your records only. Enter cash takeovers/delistings here as a negative quantity at the cash price per share, and DRP units as a positive quantity.<br>• Consolidations/splits (rows 47–66, columns A–C): Ticker, Effective Date, Ratio (new units per old). Applies to parcels bought on or before the effective date.<br>• Demergers (rows 72–90, columns A–D): Account, Ticker, Effective Date, fraction of cost base retained by the original ticker. Also add the new demerged shares to the main register at their apportioned cost base.<br>The guide at rows 32–42 is reference only. | Go to → |
| 9 | **Add trust / managed fund distributions** | Set the Financial Year in B2 to match CGT Summary. From row 7, enter each trust or MIT's annual tax statement (AMMA) amounts in columns A–D: name, discount-method capital gain, other-method capital gain and capital loss. Enter discount gains grossed up (before the CGT discount), because CGT Summary applies the discount itself. Totals flow to CGT Summary F8:F10 only when the year matches. | Go to → |
| **4. REVIEW RESULTS** | | | |
| 10 | **Read the CGT summary** | Rows 7–17 of CGT Summary show the selected year (shares plus trust distributions): long-term (discountable) gains, short-term gains, capital losses, losses applied, CGT discount, Net Taxable Capital Gain and losses carried forward. Rows 21–31 show a share-sales rollup across all years. Note: Losses carried forward to next year (B17) comes from that share-sales rollup, so it does not reflect an F5 override or trust capital losses. | Go to → |
| 11 | **Check the parcel detail** | CGT Detail lists every matched buy/sell parcel with its financial year, holding days and classification. The reconciliation in columns Q–V should tie to the share-sales rollup on CGT Summary (columns E–G, from row 22). Trust distributions are not included. | Go to → |
| 12 | **Reconcile holdings** | Holdings 30 Jun shows the unsold parcels at the selected year-end. Compare against your broker's 30 June holding statement. A difference usually means a missing trade or corporate action. | Go to → |
| 13 | **Transfer to your tax return** | Use Net Taxable Capital Gain (B16) and Losses carried forward to next year (B17) from CGT Summary. If you've used F5 or entered trust capital losses, check B17 by hand (B10 + B12 − B13). For individuals this is the capital gains section of the return (Item 18). Keep this workbook with your tax records. | Go to → |
| **5. HOW IT WORKS** | | | |
| • | **Calculation tabs (don't edit)** | Parsed, FIFO Matches, CGT Detail, Holdings 30 Jun, Transaction History and Account Summary are fully formula-driven and update when you add data. | |
| • | **FIFO matching** | Each sale is matched against the oldest unsold parcel of the same ticker in the same account (first in, first out). | |
| • | **12-month rule** | A parcel is long-term (discountable) only if the sale date is after the same calendar date 12 months after purchase — i.e. at least 12 months excluding both the purchase day and the sale day (ATO rule). Example: bought 2 Feb 2020 → discount applies to sales on or after 3 Feb 2021. Others are short-term. | |
| • | **Brokerage** | Buy brokerage is included in the cost base. Sell brokerage reduces sale proceeds and is spread across the matched parcels. | |
| • | **Loss order** | Current and carried-forward losses are applied to short-term gains first, then to discountable gains, before the CGT discount. | |
| • | **Financial year** | Each sale is assigned to a financial year by its trade (sale) date. Years end on 30 June. | |
